How to measure for Curtains

Always use a metal tape measure when taking measurements

1- **Width** measure the full width of the track or pole.

2- **Drop**

First decide the “look” you would like to achieve

Above floor - Curtain will be off the floor level - measure to the floor and take off in mm what distance you want the fabric to hang. I.e. 10mm

Touching floor - Curtain will be touching the floor..

Puddling - Curtain will be dragging on the floor. Measure the height and add in mm how much drag you would like. I.e. 200mm

Drop for Poles

Measure from **middle** of pole to the floor and adjust to any of desired style as above.

Drop for Tracks

Measure from **top** of pole to the floor and adjust to any of desired style as above.
